

## Grade Tracker

The Grade Tracker is a student-friendly tool that helps students manage their own academic journey, using features like **grade organisation** by subject or course, as well as **flexible input options** supporting different types of assessments like quizzes, exams, homework, etc. Moreover, apart from such flexible input options, users are able to set their **customised weights** for different types of assessments depending upon the relative significance of these types. Based on the weighted assessments, overall grades are **automatically assessed** by the system. Also, it emphasises **progress tracking** and assists students to check their academic progress using visuals and goals settings. In case of **deadlines** and low marks, the system **notifies** students in good time so that they can remain organised and keep pace with their homework.
