

Sprint 4 Progress Update

We have made significant progress in Sprint 4, and I'm excited to report that we have completed the grade entry feature, which allows users to input grades and weights, categorize assessments, and view their grades.

In addition to the grade entry feature, our login and sign up back-end is already running smoothly, and we've successfully hosted it on Hostinger.

Sprint Retrospective

What went well:

- The team worked efficiently to complete the grade entry feature, which was a complex task.
- We were able to leverage our existing knowledge of the back-end to quickly set up the login and sign up functionality.

What could be improved:

We encountered some issues with data validation and error handling in the grade entry feature. While we were able to resolve these issues, we could have avoided them altogether with more thorough testing earlier on.

What needs to be done:

In the next sprint, we will focus on completing the backend of the dashboard, specifically Phase 3: Advanced Features. This includes:

Progress Tracker

- Visual graphs and charts
- Detailed progress reports
- Comparison with goals
- Downloadable reports

Goals

- Set academic goals
- Edit goals
- Track goal progress
- Achievements and milestone
