

## SkillSwap

SkillSwap is a smartphone app, which is built for iOS powered devices and Android. It facilitates the sharing of knowledge between students. For instance, users have access to **user profiles** where they can indicate the skills at their disposal. The matching of people is done by this application using the **skill matcher**. A **skill exchange marketplace** allows its users to exchange their skills for other people's support or ask for help where they lack it. Also, the same platform provides **virtual workshops, tutorials, and skill training sessions** where learners are taught by their fellows, alumni, or professionals in different industries. To ensure that there's quality in what members do, the application has a **feedback and rating** feature that helps rate what others have done while giving them credit for their learning experience.
